PhonePe Limited

Recruiting Team

Bengaluru, Karnataka, India

Subject: Application for Site Reliability Engineer

Dear Hiring Manager,

I am writing to express my strong interest in the Site Reliability Engineer position at PhonePe. With a deep foundation in Linux system administration, network troubleshooting, and Python-based infrastructure automation, I am highly aligned with PhonePe's mission to maintain the reliability and performance of one of the world's largest FinTech infrastructures.

Currently, as an Engineer at Tata Consultancy Services (TCS) managing enterprise-scale infrastructure, I operate directly on the front lines of production reliability. I am responsible for ensuring the availability of a high-throughput, event-driven architecture processing 200 GB to 500 GB of data daily. My day-to-day involves designing and maintaining automated CI/CD deployment lifecycles using GitHub Actions and Docker, ensuring that continuous delivery pipelines are robust and secure.

PhonePe's requirement for deep Linux/Unix administration and networking proficiency strongly resonates with my core skill set. I developed a deep foundation in OS troubleshooting by utilizing system calls (strace), tcpdump, and Wireshark to resolve complex routing failures. Furthermore, I have hands-on experience hardening server security, configuring Nginx reverse proxies, and managing network firewalls (iptables, UFW), which translates directly to maintaining secure, always-up private cloud and FinTech environments.

A core part of my engineering philosophy is reducing operational toil through scripting. I recently engineered a Python and Boto3-based automation script that completely replaced manual deployment validation checklists. By deeply integrating Datadog and CloudWatch, I built alerting mechanisms for low-latency applications that successfully reduced manual operational toil by 90% for a 30-person engineering team. I apply this same analytical rigor to container security, continuously driving Root Cause Analysis (RCA) on Docker images and patching critical CVEs to minimize potential downtime.

I thrive in fast-paced environments where intellectual curiosity is valued, and I am fully prepared to join your on-site team in Bengaluru and participate actively in the on-call rotation schedule. I would welcome the opportunity to discuss how my proactive approach to incident management, Linux networking, and automation can contribute to the continued scale and stability of PhonePe's platform.

Thank you for your time and consideration.

Sincerely,

Akashdip Mahapatra
